Patent No	Kind	Date	Applicat No	Kind	Date	Main IPC	Week
JP 4004022	A	19920108					199208 B

Abstract (Basic): JP 4004022 A

Device includes reverse osmosis membrane, where solution is contacted with reverse osmosis membrane under pressure, and solute is permeated to outside through membrane to separate solute from solvent. Calcium phosphate is contained in soln.

ADVANTAGE - Attachment of scale or slime to inner surface of reverse osmosis membrane can be prevented.

Patent Family:

Patent No	Kind	Date	Applicat No	Kind	Date	Main IPC	Week
JP 52128888	A	19771028					197749 B

Abstract (Basic): JP 52128888 A

Process is claimed for treating foodstuffs, brine, waste water, etc. using a membrane such as an inverse-osmotic ultrafiltration, or microporous membrane with application of pressure to drive the sepn. process of e.g. water. The water is sepd. into a concentrate and membrane-penetrating liqs., and the concentrate is further sepd. as the membrane into a concentrate and membrane penetrating liqs. in several stages to obtain a more conc. liq.

Novelty is that a membrane structure having a large packing density is provided, at least, in the first stage of membrane sepn. and a tubular membrane structure is provided, at least, in the final stage for membrane sepn. Former structure comprises a hollow yarn type membrane.
